

**Isabelle Strickler**  
Project Manager

Graduate Engineer (Diplomierte Technikerin), HF Hochbau

---

“I find it very exciting and instructive when lines on paper actually turn into a new home.”

---

During my training as architectural draughtswoman, I realised that lines are not just lines: they will actually be transformed into a building and the contractor must be able to construct them in real life. Having successfully completed my training, I wanted to set the path for closer involvement with my projects and started working as a construction manager. On top of this, I went on to gain a degree in structural engineering. This had the desired effect and I became involved in a range of different responsibilities, hands-on implementation of plans, cost management, scheduling, quality assurance and direct contact with clients, planners and the different trades. It is this diversity that I love about my job. Supervising a project from the development stage all the way to completion and handover always brings new challenges with it. This keeps things interesting for me. Aside from careful selection and planning, I also rely on my reliable intuition when I approach these challenges and bring the projects to a successful completion.
