(Polier Hochbau Zentralschweiz)

Construction Manager, Engineering Degree  
(Bauführer dipl. Techniker HF)

---

“It is the wide range of different responsibilities that makes my job so interesting. I like to be on the move and love helping people. My motto is: To be well prepared, rise early and get the day off to a good start.”

---

After my training as a bricklayer, I went on to do a part-time course, qualifying as a structural engineering foreman and working on various residential developments for a number of years.

The following 6 years, I spent as a self-employed bricklayer, carrying out minor extensions and conversions for architects and private clients. Since 2015, I have been working as facility manager of the Hohle Gasse AG industrial centre in Immensee where Varem Development AG has its central office. With structural changes a frequent occurrence at the industrial centre, I can draw on my extensive expertise and even do some of the building work myself. Since 2021, I have also taken on construction management responsibilities for Varem.

It is important to me to ensure that our buildings are always in good shape and kept fully modernised. This raises the properties' value. In my private life, I love cycling, fresh air and the joys of nature.
