

Michael Jablonski
Architect Dipl. Ing. Arch. TUM
Project Manager

“For me, buildings are always contemporary witnesses that communicate with each other in their own way across generations. That spurs me on to create buildings that do the same for future generations. ”

Since studying architecture in Munich, I have developed, planned and realised a wide variety of buildings in Munich, Zurich and Basel.

Renovations, conversions, new buildings and concept developments are among my areas of experience. I have also realised large projects such as a perimeter block development, a service building in the Core&Shell concept or a development laboratory in the chemical industry. I was able to develop and implement new, innovative concepts in hospital construction and retirement living. And in residential construction, I have developed and realised several buildings in close cooperation with the clients.

As an architect, I was fascinated and excited from the very beginning by the complexity and multi-layered nature of the tasks that had to be solved in order to make a building a reality.
